EXECUTIVE COMMITTEE OF THE  
FRIENDS OF THE ARMY MEDICAL LIBRARY  
Washington, D. C.

A THESIS ROOM

The other day, one of our staff was complaining about the crowded conditions in the "Thesis Room" which is what we call the room that holds a good part of our medical graduation theses. Unfortunately for our peace of mind this is not the only place where we keep such dissertations, for it is impossible to keep them confined to a single room. They crawl all over the library, some 200,000 of them, and they cause many a headache for each one of us.

Some of them, for example the theses of the Paris Faculty of Medicine, behave nicely in a row several hundred feet in length, each year's product bound together with the necessary indices and what not. They are respectable members of an old family even if their garments are somewhat worn. There is the whole set from 1796 on, ending with -- or, rather, never ending. We have just sent the 1939 theses to our bindery in the Government Printing Office, and, war or no war, they are still marching on.

Let me tell you, we are very proud of our Paris theses, so proud indeed that if ever one of us had the opportunity of going to Europe he never forgot to visit the Bibliothèque Nationale in Paris just to make our French colleague disturbed by requesting a medical theses which he did not have. Indeed our collection of Paris theses is more complete than the one in their home town. This may well turn out to be the stimulus for our keeping them in serried ranks, despite much sacrifice of stack space. So one finds them in order and easily accessible.

What about the others,- the theses from University This and the disputations from University That? Some of them are just a few leaves, some of them are thick octavos, while others are typewritten loose-leaved things with hand drawn charts, and still others are finely printed volumes with many colored plates. They are all sentenced to occupy small dungeons of various sizes, and they stand up in vertical files arranged alphabetically by their authors. The boxes are labeled with the names of scores of university towns of the world-map: Altorf, Basel, Berlin; Bruxelles, Bucuresti, Budapest, through København, Paris, Sankt Peterburg, Stockholm, on and on to Zürich.

We saw at once that the complaint about the crowding of the thesis room is true. There is not a single inch of space left in any of the boxes for the squeezing in of any more theses. All the available room is taken up now by the medical dissertations of the last three centuries. Some of them date back even as far as the 16th century. New ones are pouring in at the rate of about 10,000 a year and Germany alone produces more than 2,000 medical theses annually. The production of medical theses seems to have been at its peak in the post-war period, when many a young medicaster returned home from the battle front.

(continued on inside back cover)

---

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. Address communications to:

Medicofilm Service  
Army Medical Library,  
Washington, D.C.

 REED, S.C. Interaction between the autosomes of *Drosophila melanogaster* as measured by viability and rate of development. 75-84.

Theses in general always have been a troublesome problem for everybody. They were first a cause for anxiety for their authors, then to the faculty itself, then to their publishers, and shortly to their catalogers and bibliographers. Finally the burden came upon their readers, not forgetting the kindly hearts in the various international exchange bureaus, such as our own Smithsonian Institution for example.

All these troubled bodies have given a literary outlet to their complaints, and, thus a very large special literature has developed around the problem of theses. Special guide books, by subjects, by countries, and by institutions, were found necessary in order to lead the student through the immeasurable literary jungle of academic life. One of the earliest of these guides is HEFFTER'S Museum Disputatorium (1763), which lists about 20,000 theses relating to medicine and natural sciences. Today, one of the most important guides to theses is the Jahresverzeichniss der Hochschulschriften, which in its annual bulky quartos lists all theses that have been written at German universities since 1885. Such lists on a more modest scale now exist for many other countries.

One can hardly venture to guess the total number of medical theses published up to the present time, but according to a rough estimate there may be today as many as 1,500,000 medical theses in print. Our own Library has about 200,000 of them, all listed in the Index-Catalogue.

Theses are the most elusive publications. It requires a special effort to gather them from all parts of the world. They cannot be purchased like ordinary books, at the corner drugstore. Not even the regular bookshops are able to secure them in many cases from the universities or from the publishers. They seem to be a nuisance to the publisher and he often fails to offer them for general sale. Since the author himself has to pay for the expenses of printing, the number of copies is never larger than the obligatory number prescribed by the rules of the faculty. Thus, theses have a way of getting scarce very easily. Some of the older and more important theses are now priced as high as \$25 or \$30. Thus, the trash of yesterday becomes the treasure of tomorrow.

Many people deny any virtue to these medical theses and, at the close of the 19th century, one of the most outstanding figures in the battle of the theses and the librarians, Ewald Horn announced that theses are of as little value today as they were centuries ago. He said, almost with rancor, that they represent a tremendous sum of purposeless work, waste of time, and waste of money.

Perhaps he was just weary of theses, having spent a good deal of his life among these immature utterances of graduating minds. In spite of his opinion theses do possess great historical and bibliographical values, and often they save time in modern research. We feel that they are not sufficiently utilized, and we intend to do something about it. After a proper rearrangement of our own thesis collection, we may consider the compilation of a special "catalogue raisonné" of theses to be printed either as a supplement to the Index-Catalogue or as a separate publication.
